Trinity™ Scent Control Technology For over 10 years Robinson Outdoor products has worked to develop Trinity™ Technology, the new pinnacle in human scent control. Trinity Technology is designed around a cutting edge synthetic polymer that was specifically created to adsorb human odor. With a huge surface area and more adsorptive kinetics, Trinity Technology will surpass the old industry standard of scent control and set the bar at a whole new level. With clothing, liquids, detergent and spray; Trinity will have a product available for everyone's budget and needs. Simply put- this technology is amazing and available nowhere else.

BODYLOCK™

BodyLock® Technology Strategically prevents easy escape of odor, and forces it through the scent adsorbing filter at key exit points of your body - wrist, neck, waist, leg cuffs - to allow maximum adsorption by the ScentBlocker scent control technology.

Durable Water Repellency The outer fabric is treated with a water repellant hydrophobic coating which forces water to bead up and roll off the surface of the fabric. It extends the saturation point of the fabric and allows you to stay comfortable and in the field longer.

RainBlocker® Technology Waterproof, windproof, breathable technology which is impermeable to outside moisture, while allowing perspiration from the inside and dispersing it through the membrane system. Garment seams are heat sealed and secured with waterproof tape.

S3™ Silver Anti-Microbial Technology S3 products utilize antimicrobial technology which helps to inhibit the growth of odor causing bacteria. S3 keeps the garment smelling fresher longer.

Thinsulate Thinsulate™ provides 1 to 2 times the insulation of duck down, while being much less water-absorbent and much more resistant to crushing. The insulation properties are beneficial for retaining some of the heat produced by the body for comfortable warmth while the moisture produced, e.g. by sweating, evaporates.
